Concept map 2:

Evolution of Cloud Computing

Evolution of Cloud Computing

- Hardware Evolution
  - Mainframes
  - Servers
  - virtualization
- Internet & software Evolution
  - Internet growth
  - web applications
  - Cloud software
- Distributed systems
  - connected computers
  - Resource Sharing
  - Grid / cluster computing
- service Delivery
  - on demand access
  - IaaS / PaaS / SaaS
  - Pay-as-you-go

concept map : 3
Cloud service models

IaaS

Provides :
virtual servers, storage, network

user :
manager, OS apps, data

Paas

Provides :
Infracture, os, runtime, development tools.

uses: manage apps, data

Saas

Provides :
complete applications, Platform, infrastructure

user : uses app, manage data

XaaS

Anything as a service

Example:
storage, Databas, Security

12/10/26

Concept map 4 : Virtualization & Web services

Virtualization

* Creates virtual machines
* Shares physical resource
* Isolated environment

Web services

* API based communicati
* connects different systems
* Enables interoperability

Enable cloud deployment & Scalabity

* Better resources utilization
* Flexible and efficient
* supports on demant access
